Seattle, WA

Python Developer with 1.5 years of professional experience building Flask-based REST APIs and optimizing database queries. CS degree (CGPA 3.7). Skilled at developing scalable back-end services and integrating with PostgreSQL and MongoDB.

Education

B.S. Computer Science

2019 – 2023

University of Washington · Seattle, WA

CGPA: 3.7/4.0 · Concentration in Data Management & Web Services

Work Experience

Junior Python Developer

Jan 2024 – Present

DataSphere AI · Seattle, WA (Hybrid)

- Develop and maintain 10+ RESTful endpoints using Flask, reducing average API latency by 18% through caching and indexing.
- Design database schemas for PostgreSQL and write optimized SQL queries for reporting features.
- Integrate third-party REST APIs (Stripe, SendGrid) into Flask application for payment and notification flows.
- Write unit/integration tests with pytest; maintain OpenAPI documentation.

Software Engineering Intern

Jun 2023 – Dec 2023

CloudNexus · Remote

- Built a Flask microservice for user authentication (JWT) and session management.
- Connected to MongoDB Atlas; implemented CRUD operations for user profiles.
- Participated in code reviews and agile ceremonies.

 Selected Projects

Inventory Management API 2024

Flask REST API with SQLAlchemy, PostgreSQL, and Redis caching. Supports batch updates, role-based access. Deployed on AWS EC2.

Real-time Chat Backend 2023

Flask-SocketIO + MongoDB for message storage; REST endpoints for user management. Handled 100+ concurrent connections.

 Technical Skills

Python Flask REST API PostgreSQL MongoDB SQLAlchemy Docker Git/GitHub Actions Pytest JWT
